Your responsibility to the insurance company: \$612,903.23

**Federal subsidy: \$1,000,000.00**

### IMPORTANT MESSAGE:

## Reform Crop Insurance!

Find information here -----> [cfra.org/crop-insurance-reform](http://cfra.org/crop-insurance-reform)

Should taxpayers be responsible for laying off this much risk for this large of a producer? This subsidy is on top of traditional farm program subsidies and is not reported as a benefit, on say a 1099 form.

**#STOPMEGAFARMS**

This Explanation of Crop Insurance Benefits shows why there should be more transparency around crop insurance premium subsidies.

\* The figures for this statement are based on an example from central Nebraska of corn-based acres with 70% coverage level. A 2012 Government Accountability Office study pointed to a farm that received over \$1.3 million in premium subsidies. We are aiming to show that if a farm of that scale (rounded down to \$1 million for simplification) was located in Nebraska growing corn, it would cover them in excess of 52,000 acres.
